

Chocks, Tie Downs, Strongbacks, and Harnesses—

Your davit, chocks, lifting gear, and tie-down arrangement form a complete tender stowage system. MarQuipt manufactures a complete line of equipment to handle any tender and personal water craft.

We pride ourselves in providing a total stowage and lifting solution custom tailored to each individual application.

Chocks—

- All of our chocks are designed for a precise fit and proper hull support.
- Marine grade aluminum construction with stainless steel fasteners and non-scuffing hull padding.
- Bow, cabin top, transom, or swim platform mounting options.
- Our standard chocks are custom templated to the make and model of the tender and painted to match your yacht.
- Cantilevered chocks for use off the transom or an integral swim platform are available.
- Chocks can be made removable as an option, affording a clean, obstruction-free deck when the tender is not present.
- We'll fabricate custom chocks for just about any item you wish to secure.

removable chock

Tie Downs—

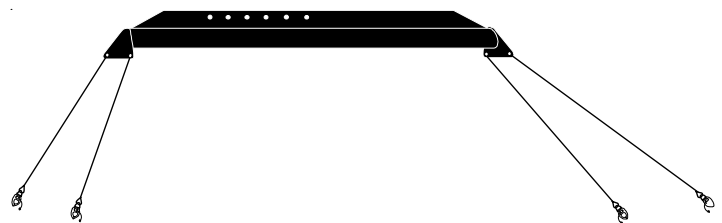

- Absolutely the easiest, quickest, safest, and most secure tie down system available.
- Fabricated from marine grade, polished and passivated 316L stainless steel.
- No tools required to secure or release the tie-down.
- Like our chocks, our tie downs can be made removable as an option, affording a clean, obstruction-free deck when the tender is not present.

doubled front tie-downs

Strongbacks—

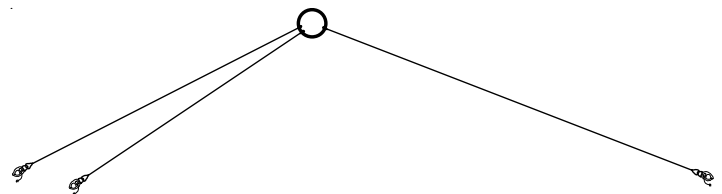

- Provides a single lift point with fore/aft balance adjustment to compensate for changing gear and fuel loads.
- Fabricated from marine grade, polished and passivated 316L stainless steel.
- Can often eliminate lift height problems by providing a lower lift point.
- Available for most tenders.
- Custom designed strongbacks for unique applications.

Harnesses—

MarQuipt manufactures a complete line of three-part, four-part, and custom harnesses to fit most any small tender or personal watercraft.

Our personal watercraft harnesses use custom made attachments and padded loops for safe, secure deployment. They do not merely hook beneath the gunnels but attach securely without requiring modification of the watercraft in most cases.
