

# Elevators—

MarQuipt offers onboard elevators custom designed to meet your specific needs. Each is designed to seamlessly integrate your functional requirements with the styling of the yacht. We pride ourselves in custom solutions that help people fully enjoy the yachting experience, regardless of disability.

We have designed elevators which disappear into the floor when not in use, incorporating materials matched to the yacht's interior. All of our elevators incorporate a hydraulic double safety system which insures smooth dependable operation. Radio remote control is also available.

## Stairwell Elevators:

Primarily used between the lower and main deck of the yacht. Examples have included integrated seating and polished stainless steel tracks recessed into the bulkhead. The example below features integrated stainless railings and a second swim elevator (*not shown*), which provides access to the water from the tender stowage and swim deck.

*One example is shown in the photos below, your application may suggest a different solution.*

## Elevator Stair Combinations:

Replaces an existing flybridge ladder. Can be used as a regular ladder, or as an elevator by stepping on the floor plate and riding to the top.
